Smart AC Drain Line Monitoring

INTELLIGENT. RELIABLE. WIRELESS.

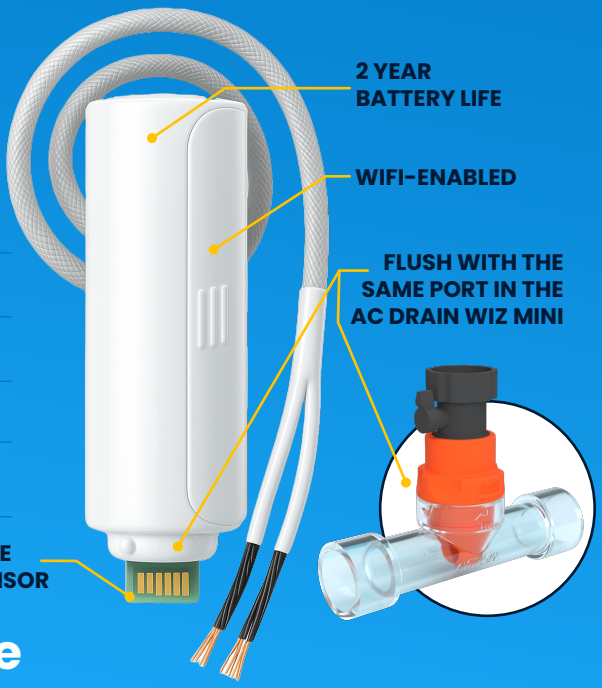

Paired with the AC Drain Wiz Mini, this WiFi-enabled, capacitive water sensor monitors drain line fill level in real time — and is **fully compliant with IMC Section 307.2.3, which allows water-level detection devices to replace traditional overflow methods.**

Why It's Better Than a Float Switch

- ✓ Detects water between 10% to 100% line capacity
- ✓ Automatically shuts down the AC unit when wired to the air handler
- ✓ Meets code while providing more visibility and reliability than a float switch

Float Switch	AC Drain Wiz Sensor
✗ Prone to clogging and mechanical failure	✓ No moving parts – capacitive sensing
✗ No visibility or data	✓ WiFi-enabled real-time alerts
✗ Standalone only	✓ Integrates with the AC Drain Wiz Mini
✗ Requires manual testing	✓ Test remotely with app /visual status
✗ Only reacts	✓ Predicts and prevents backups

Smart for Everyone

For Inspectors & Code Officials

- Meets IMC 307.2.3
- Installs with the Mini for total access and visibility
- No guessing if protection is active — it tells you

For Government & Facilities

- Predictive protection from water damage
- Centralized alerting = better oversight
- Less downtime, more accountability

For Contractors & Builders

- Faster installs
- Code-aligned from day one
- Wireless monitoring = fewer callbacks
